By Eddy Emerson, eddy@emersonboiler.com

NEWSLETTER #27 - FIREYE NEW NEXUS SYSTEM

Fireye is an American Company with an outstanding reputation in the Flame Safeguard industry. The boiler and burner industry has been moving from the conventional jackshaft (single point) firing rate or modulation systems to parallel systems for several years. **Fireye** is by far and away the leading American Company.

The Fireye NX6100 packs the ability to control up to ten servomotors and VSD in the industry's smallest footprint, 5 x 8.25 x 3.75 inches. It has all the features that Siemens or AutoFlame possess and is an affordable American product with the best warrantee in the burner industry.

Honeywell Controlinks™ has been the least expensive, but limited in the size of equipment (about 300hp boilers). It is also limited in capability, but still a good American product.

Fireye has hit the street with a new NEXUS the PPC400 which is priced to compete with Honeywell Controlinks™ and has many more features. This FUEL AIR RATIO CONTROLLER can be use with either an existing Fireye Flame Safeguard control made for modulation or a Honeywell Flame Safeguard control. **Now that is a good deal!! No buying that extra equipment!!**

Many of the power companies, like Arizona Public Service, will kick in some serious bucks to help you make the conversion from a conventional linkage system to an energy saving Fireye parallel positioning system. **I don't want to get kicked in the back, but a kick back from the power company who has been taken my money for years sounds like a good deal (it's payback time!).**

Emerson Boiler, Inc.
